DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 9 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Fellenstein et al. (US 6,747,555).

Regarding claim 9: Fellenstein et al. discloses a tracking system comprising a radio frequency identification (RFID) tag affixed to a personal article (28-31); a plurality of RFID tracking processors (18, 19) coupled to a corresponding plurality of pervasive devices managed by a corresponding plurality of subscribers; and, a central command (40) communicatively coupled to said pervasive devices (Fig. 1; col. 3, lines 21-62).

Regarding claim 10: Fellenstein et al. discloses the tracking processor disposed at a stationary location within a fixed region (col. 6, line 49-col. 7, line 17; Fig. 5).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fellenstein et al. (US 6,747,555).

Regarding claim 11: Fellenstein et al. discloses the location is at a point of egress as seen in Fig. 5 of the nursery (512); kitchen (511) and the office (513). Fellenstein et al. does not disclose a kiosk; however, it is a well-known stationary information station located in various public environments to assist the user of information regarding the local public environment. Thus, placing the tracking unit in a certain location within the environment is merely a matter of design choice for tracking the environment.

Regarding claim 12: Fellenstein et al. does not disclose the region being the public region as a shopping mall, an amusement park, an airport, a bus station and a train station; however, it is merely a matter of design choice for placing the tracking unit in a certain location within the environment for the purpose to tracking an item in a particular environment.

Regarding claim 13: Fellenstein et al. disclose the article is worn by the dog; thus, one would obviously recognizes that the article might be worn by anyone being monitored.

Art Unit: 2632

Regarding claim 14: Fellenstein et al. discloses the article comprises a baby crib; thus, one would obviously recognizes that the article might be worn by anyone being monitored.

Allowable Subject Matter

Claims 1-10 and 15-17 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Martin et al. (US 6,727,810), Kreiner et al. (US 6,900,731), Beri et al. (US 6,353,390), Struble et al. (US 6,433,685), Land (US 6,917,290), and Lastinger et al. (US 6,552,661) are cited to show a variety of article tracking systems.
